3. MECHANISM

3.1 Remove Covers

1. Remove 4 screws from printer.

2. Open printer right side cover and remove 2 screws then close the cover.

3. Remove the electronics cover.

4. Remove 3 screws from each hinge. Be careful the right side cover may fall out from the printer. Take out the right side cover from the printer.

5. Reassemble the parts in the reverse procedures.

3.2 Replacing the LCD Panel Module

1. Refer to section 3.1 to remove the electronics cover.
2. Disconnect harness from the LCD panel module.
3. Push two tabs to remove/replace the LCD panel module.

4. Remove 5 screws to replace LCD panel PCB ASS'Y and LCD panel ASS'Y.

LCD panel PCB assembly

5. Reassemble the parts in the reverse procedures.

3.3 Replacing the Power Supply Unit

1. Refer to section 3.1 to remove the electronics cover.
2. Disconnect 2 connectors and remove 2 screws on the power supply unit.

Note:

For new power supply unit (as shown below), it need to change new DC cable.(10PIN on PSU , 8PIN on PCB)

3. Replace the power supply unit.
4. Reassemble the parts in the reverse procedures.

3.4 Replacing Multi-interface Board

1. Refer to section 3.1 to remove the electronics cover.
2. Remove 4 screws then take off the interface plate.

3. Remove 2 screws from multi-interface board.

4. Replace the multi-interface board.

5. Reassemble the parts in the reverse procedures.

3.5 Replacing the Main Board

1. Refer to section 3.1 and 3.4 to remove electronics cover and multi-interface board.
2. Disconnect all connectors from the main board.
3. Remove 2 copper pillars and 2 screws.

4. Replace the main board.
5. Reassemble the parts in the reverse procedures.

3.6 Replacing the Platen Roller Assembly

1. Open printer right side cover.
2. Disengage print head lift lever.
3. Remove the 1 screw to remove gear cover.

4. Remove 4 screws from the platen holder.

5. Take out the platen holder, platen roller assembly and replace a new platen roller assembly.

6. Reassemble the parts in the reverse procedures.

3.7 Replacing the Stepping Motor

1. Refer to section 3.1 to remove the electronics cover.
2. Disconnect the stepping motor connector from the main board.

Stepping motor connector

3. Remove 3 screws and 1 fixed tie on the stepping motor.

Screws

4. Replace the stepping motor.
5. Reassemble the parts in the reverse procedures.

3.8 Replacing the Print head ASS'Y

1. Open the printer right side cover.
2. Remove 2 screws from the mechanism.

3. Disengage print head release lever.
4. Carefully disconnect 2 connectors from the print head ASS'Y.

5. Replace the print head ASS'Y.

6. Connect the print head cable and carefully slide assembly into the print mechanism. The holes of print head assembly must align and then insert the tenons of print mechanism.

7. Reassemble the parts in the reverse procedures.

3.9 Replacing the Gap and Black-mark Sensor Module

1. Open the printer right side cover.
2. Disengage print head release lever.
3. Refer to section 3.1 and 3.4 to remove electronics cover and multi-interface board.
4. Disconnect the gap and black-mark sensor connectors from the main board.

5. Remove 1 screw to take off the sensor cover from print head mechanism.

6. Replace the sensor module.

Black-mark sensor module	Gap sensor module
	

7. Reassemble the parts in the reverse procedures.

3.10 Replacing the DC Motor Module

1. Refer to section 3.1 to remove the electronics cover.
2. Disconnect the DC motor module connector from the main board.

3. Remove 4 screws from DC motor fixed plate.

4. Replace the DC motor module. (Including ribbon near end sensor.)

5. Reassemble the parts in the reverse procedures.

3.11 Peel-off Kit Installation (Option)

Peel-off kit parts list:

1. Internal rewinder spindle
2. Harness for DC motor control board
3. Peel-off cover (Including peel-off sensor assembly)
4. Screw # 1
5. Gear
6. Pillar
7. Screw # 2
8. Copper pillar
9. Screw # 3
10. DC motor control board assembly
11. DC motor kit (Including DC motor and sensor assembly)
12. Screw # 4

1. Refer to section 3.1 to remove the electronics cover.
2. Remove 3 screws and 1 connector to remove the DC motor assembly. (DC motor fixing plate)

3. Open the right side printer cover. Remove the dustproof cover from internal rewinder spindle reserve hole.

4. Install the pillar to the printer. Please refer to the above fig. Use wrench (No. 7) to fasten the pillar.

5. Remove 2 screws from the internal rewinder spindle.

6. Separate the internal rewinder spindle and shaft as above picture.

7. Put the bearing into the internal rewinder shaft hole. (Left side)

8. Insert the gear shaft into the internal rewinder shaft hole.

9. Put the bearing (right side), felt fabric and gasket onto the shaft.

10. Insert the internal rewinder spindle to the shaft and fasten the screw.

Note: The spindle screw hole must be in alignment with the screw hole on rewinder shaft.

11. Rotate the spindle 180 degree and fasten the other screw at the internal rewinder spindle.

12. Use the screw (#2) to fasten the gear into the pillar by slotted screwdriver.

Note: Turn the gear to confirm that it works with internal rewinder gear.

13. Install 2 copper pillars to the DC motor fixing plate.

14. Place the two locating protrusions on the motor into the locating holes on the fixing plate. Make sure the protrusions are at lower position of locating holes.

15. Use 4 screws (#4) to fix the DC motor and sensor board on the plate. Use 2 screws (#3) to fix the DC motor control board on the copper pillars. Plug the DC motor kit harness into the DC motor control board.

16. Use 3 screws to fasten the DC motor plate to the printer mechanism. Plug the DC motor control board harness into the DC motor control board. (White connector)

17. Remove 4 screws to take off the printer interface plate.

18. Remove 2 screws from multi-interface board to remove the multi-interface board.

19. Connect the DC motor harness and the DC motor control board harness to main board. Then, reassemble the parts in the reverse procedures.

20. Remove 2 screws to take off the lower front panel.

21. Plug the peel-off mini DIN cable connector into the peel-off/cutter connector and place the cable in the cable cavity. The triangle mark on the connector must be at the upper side.

22. Fasten 2 screws (# 1) at the peel-off module to fix the peel-off module to the printer mechanism.

3.12 Cutter Module Installation (Option)

1. Open the printer right side cover.
2. Remove 2 screws to remove the lower front panel.

3. Plug the cutter mini DIN cable connector into the cutter/peel-off connector. The triangle mark on the connector must be at the upper side.

4. Use 2 screws to lock the cutter fixing plate onto the front printer.

5. Place the cutter module into the cutter fixing plate. Please refer to the following fig.

6. Fasten the 1 screw at the cutter bracket to fix the cutter module to the printer mechanism.

4. TROUBLESHOOTING

4.1 Common Problems

The following guide lists the most common problems that might be encountered when operating this bar code printer. If the printer still does not function after all suggested solutions have been invoked, please contact the Customer Service Department of your purchased reseller or distributor for assistance.

Problem	Possible Cause	Recovery Procedure
Power indicator does not illuminate	* The power cord is not properly connected.	* Plug the power cord in printer and outlet. * Switch the printer on.
Carriage Open	* The printer carriage is open.	* Please close the print carriage.
No Ribbon	* Running out of ribbon. * The ribbon is installed incorrectly.	* Supply a new ribbon roll. * Please refer to the steps in user's manual to reinstall the ribbon.
No Paper	* Running out of label. * The label is installed incorrectly. * Gap/black-mark sensor is not calibrated.	* Supply a new label roll. * Please refer to the steps in user's manual to reinstall the label roll. * Calibrate the gap/black-mark sensor.
Paper Jam	* Gap/black-mark sensor is not set properly. * Make sure label size is set properly. * Labels may be stuck inside the printer mechanism.	* Calibrate the gap/black-mark sensor. * Set label size correctly.
UP : Fwd. DOWN : Rev. MENU : Exit	* Cutter jam. * There is no cutter installed on the printer. * Cutter PCB is damaged.	* If the cutter module is installed, please press UP or DOWN key to rotate the cutter up or down to make the knife back to the right position. * Remove the label. * Make sure the thickness of label is less than 0.254 mm (10mil) * Replace a cutter PCB.

TTP-268M/ TTP-366M

Bar Code Printer Service Manual

Not Printing	<ul style="list-style-type: none"> * Cable is not well connected to serial or USB interface or parallel port. * The serial port cable pin configuration is not pin to pin connected. 	<ul style="list-style-type: none"> * Re-connect cable to interface. * If using serial cable, <ul style="list-style-type: none"> - Please replace the cable with pin to pin connected. - Check the baud rate setting. The default baud rate setting of printer is 9600,n,8,1. * If using the Ethernet cable, <ul style="list-style-type: none"> - Check if the Ethernet RJ-45 connector green LED is lit on.. - Check if the Ethernet RJ-45 connector amber LED is blinking. - Check if the printer gets the IP address when using DHCP mode. - Check if the IP address is correct when using the static IP address. - Wait a few seconds let the printer get the communication with the server then check the IP address setting again. * Chang a new cable. * Ribbon and media are not compatible. * Verify the ribbon-inked side. * Reload the ribbon again. * Clean the printhead. * The print density setting is incorrect. * Printhead's harness connector is not well connected with printhead. Turn off the printer and plug the connector again. * Check if the stepping motor is plugging in the right connector. * Check your program if there is a command PRINT at the end of the file and there must have CRLF at the end of each command line.
Memory full (FLASH / DRAM)	<ul style="list-style-type: none"> * The space of FLASH/DRAM is full. 	<ul style="list-style-type: none"> * Delete unused files in the FLASH/DRAM. * The max. numbers of file of DRAM is 256 files. * The max. user addressable memory space of DRAM is 2048 KB. * The max. numbers of file of FLASH is 256 files. * The max. user addressable memory space of FLASH is 6656KB.

Power and Error LEDs are blinking fast	<ul style="list-style-type: none"> * Power switch OFF and ON too fast. 	<ul style="list-style-type: none"> * Turn off the printer and wait all LEDs are dark, and turn on the printer again.
Wrinkle Problem	<ul style="list-style-type: none"> * Printhead pressure is incorrect. * Ribbon installation is incorrect. * Media installation is incorrect. * Print density is incorrect. * Media feeding is incorrect. 	<ul style="list-style-type: none"> * Make sure the label guide touch the edge of the media guide. * Make sure label, paper core and ribbon are set at the center of the spindle.
Gray line on the blank label	<ul style="list-style-type: none"> * The printhead is dirty. * The platen roller is dirty. 	<ul style="list-style-type: none"> * Clean the printhead. * Clean the platen roller.
Irregular printing	<ul style="list-style-type: none"> * The printer is in Hex Dump mode. * The RS-232 setting is incorrect. 	<ul style="list-style-type: none"> * Turn off and on the printer to skip the dump mode. * Re-set the RS-232 setting.

4.2 Print Head Pressure Adjustment Knob

There are two conditions that will need to adjust the print head pressure.

1. Print with thick media

If media thickness is larger than 0.19 mm, the larger pressure is required to get good quality printout.

2. Edge alignment media

The media alignment is designed at the left edge of mechanism to keep the pressure balance between print head, media and ribbon.

There are 5 levels of pressure for adjustment. Level 1 is the minimum pressure and level 5 is the maximum pressure.

For example, if the label width is 6", adjust both print head pressure adjustment knobs to the same level. If the label is less than 2" wide, increase the left side print head pressure by rotating the adjustment knob clockwise and decrease the right side pressure by rotating the adjustment knob counter-clockwise to level 1. If the left side print head adjustment knob setting has been set to 5 (the highest pressure index) than increase the middle print head pressure.

Please refer to the following pressure knob adjustment recommendation.

6" width label		
Left index	Middle index	Right index
1	1	1
2	2	2
3	3	3
4	4	4
5	5	5

2" width label		
Left index	Middle index	Right index
2	1	1
3	1	1
4	1	1
5	1	1
2	2	1
3	2	1
3	3	1
4	2	1
4	3	1
4	4	1
5	2	1
5	3	1
5	4	1
5	5	1

4.3 Mechanism Fine Adjustment to Avoid Ribbon Wrinkles

This printer has been fully tested before delivery. There should be no ribbon wrinkle presented on the media for general-purpose printing application. Ribbon wrinkle is related to the media thickness, print head pressure balance, ribbon film characteristics, print darkness setting...etc. In case the ribbon wrinkle happens, please follow the instructions below to adjust the printer parts.

Adjustable Printer Parts		
Symptom	1. Wrinkle happens from label lower left to upper right direction (" ' ")	2. Wrinkle happens from label lower right to upper left direction (" ` ")
Wrinkle Example		

	<p>Adjust the print head pressure adjustment knob</p> <p>Left knob Middle knob</p>  <p>The print head pressure adjustment knob has 5 levels of settings. Clockwise direction adjustment is to increase the print head pressure. Counter Clockwise adjustment can decrease the print head pressure.</p> <p>If the wrinkle on the label starts from the lower left side to upper right side, please do following adjustment.</p> <ol style="list-style-type: none"> 1. Decrease the right side print head pressure adjustment knob setting 1 level per each adjustment then print the label again to check if wrinkle is gone. 2. If the right side print head adjustment knob setting has been set to index 1 (the lowest pressure index), please increase the left side print head pressure. 3. If the left side print head adjustment knob setting has been set to 5 (the highest pressure index) the wrinkle can't be avoided, please increase the middle print head pressure knob. 4. If the wrinkle can't be avoided, please refer to next chapter to adjust the Z-axis mechanism adjustment knob. <p>Pressure knob adjustment reference:</p> <ul style="list-style-type: none"> • 6" label <table border="1"> <thead> <tr> <th>Left index</th> <th>Middle index</th> <th>Right index</th> </tr> </thead> <tbody> <tr><td>2</td><td>1</td><td>1</td></tr> <tr><td>3</td><td>1</td><td>1</td></tr> <tr><td>4</td><td>1</td><td>1</td></tr> <tr><td>5</td><td>1</td><td>1</td></tr> <tr><td>5</td><td>2</td><td>1</td></tr> <tr><td>5</td><td>3</td><td>1</td></tr> <tr><td>5</td><td>4</td><td>1</td></tr> <tr><td>5</td><td>5</td><td>1</td></tr> </tbody> </table> <ul style="list-style-type: none"> • 3" label <table border="1"> <thead> <tr> <th>Left index</th> <th>Middle index</th> <th>Right index</th> </tr> </thead> <tbody> <tr><td>2</td><td>2</td><td>1</td></tr> <tr><td>3</td><td>3</td><td>1</td></tr> <tr><td>4</td><td>4</td><td>1</td></tr> <tr><td>5</td><td>5</td><td>1</td></tr> </tbody> </table>	Left index	Middle index	Right index	2	1	1	3	1	1	4	1	1	5	1	1	5	2	1	5	3	1	5	4	1	5	5	1	Left index	Middle index	Right index	2	2	1	3	3	1	4	4	1	5	5	1	<p>Adjust the print head pressure adjustment knob</p> <p>Middle knob Right knob</p>  <p>The print head pressure adjustment knob has 5 levels of settings. 4.4 Z-axis Mechanism Adjustment Knob

**Z-axis mechanism
adjustment knob**

Fixing nut

**Indicator (The default position is set
at the lowest line.)**

Fixing screw

For narrow media, If change the print head pressure adjustment knob setting can't get the printout without ribbon wrinkle, the Z-axis mechanism adjustment knob should be adjusted to get the satisfied printout. This Z-axis mechanism adjustment knob is used to fine tune the right side pressure of print head. Before fine tune the print head right side pressure, please set the pressure adjustment knob to index "1" then use the Z-axis adjustment knob to fine tune the right side print head pressure. Please refer to the adjustment steps as below.

1. Loosen the fixing nut to the top of knob. (Move the nut only.)

2. Loosen the fixing screw.

3. Please be noted that print head right pressure find turn should be done by try-and-error. Rotate the Z-axis mechanism adjustment knob clockwise for a few degrees by screwdriver and print again to check if the ribbon wrinkle remains. If the wrinkle still remains, please turn the Z-axis mechanism adjustment knob clockwise about 1/4 circle each time for adjustment.

5. MAINTENANCE

This session presents the clean tools and methods to maintain your printer.

1. Please use one of following material to clean the printer.

- Cotton swab (Head cleaner pen)
- Lint-free cloth
- Vacuum / Blower brush
- 100% ethanol

2. The cleaning process is described as following

Printer Part	Method	Interval
Print Head	<ol style="list-style-type: none"> 1. Always turn off the printer before cleaning the print head. 2. Allow the print head to cool for a minimum of one minute. 3. Use a cotton swab (Head cleaner pen) and 100% ethanol to clean the print head surface. 	Clean the print head when changing a new label roll
Print Head	 <p>The diagram illustrates the cleaning process for a printer's print head. It shows a side view of the print head assembly. An 'Element' is labeled, pointing to the internal print head components. A 'Head Cleaner Pen' is shown being applied to the surface of the print head. An inset diagram provides a detailed view of the internal structure of the print head, showing the element and the cleaning path.</p>	
Platen Roller	<ol style="list-style-type: none"> 1. Turn the power off. 2. Rotate the platen roller and wipe it thoroughly with 100% ethanol and a cotton swab, or lint-free cloth. 	Clean the platen roller when changing a new label roll
Sensor	Compressed air or vacuum	Monthly

Bar Code Printer Service Manual

Exterior	Wipe it with water-dampened cloth	As needed
Interior	Brush or vacuum	As needed

Note:

- Do not touch printer head by hand. If you touch it careless, please use ethanol to clean it.
- Please use 100% Ethenol. DO NOT use medical alcohol, which may damage the printer head.
- Regularly clean the print head and supply sensors once change a new ribbon to keep printer performance and extend printer life.
